

HP 1100 Local/Network Printer Set Up

An error message occurs if the HP 1100 Business Inkjet printer is set up in the standard way. This printer can however successfully be set up using the printer tool as follows. This method needs to be followed for both local and Network printer set up.

1. Connect printer to PC (i.e. Parallel port or USB cable)
2. Then open the Printer tool
3. Select local printer button (or Network if using in an office on the network i.e. no Printer cable attached between the PC and Printer. In this case the Host name needs to be added which is displayed on a label on the printer).
4. Add some text in the description box. For this printer click the Driver File button.
5. Then double click on the drivers folder:
6. Then double click on HP folder
7. Then double click on the BI folder
8. THEN > 1100 Folder >
9. Then hpf1100k.inf folder
10. Then double click on the blue 'Type of Printer' bar and a drop down list will appear with hp business inkjet 1100 series. After a few minutes a message will appear to confirm the printer has been set up.
11. Double click on one of these.
12. Set the printer as default if required
13. Go to the printers and faxes window And the new printer will be displayed.
14. When selecting print the default printer will appear in the printer window
15. If there is more than one printer set up (i.e. office and local) the printer selected can be changed by clicking on the dropdown arrow next to the printer and selecting the printer required.
